

Color printing in Mastercam X MR1

After installing Mastercam X MR1, some users are going to find that the color option for printing is disabled, even though they are trying to print to a color printer:

This does not mean that it is impossible to print in color with the printer. Exit Mastercam and enter (in Windows) My Computer / Control Panel. Next, double click the "Mastercam X" applet. Once the dialog is open, enable the "Force color print option". After enabling the checkbox, press the "apply" button. Make sure the status bar reads "print color option enabled" and exit the dialog:

Next, restart Mastercam, open a file or create some geometry on the graphics screen, and click File / Print. The color option will not longer be disabled:
